BISSO MARINE LAYS PIPE FROM DIVE SUPPORT VESSEL

NEW ORLEANS (May 20, 2009) – Bisso Marine, a premier provider of energy and maritime support services, recently completed a pipelay project off the Southeast Louisiana coast.

Dive crews aboard the DSV JOSEPH BISSO successfully laid 900 feet of six-inch pipe at a water depth of 66 feet about 20 miles south of Grand Isle in the Gulf of Mexico. The pipeline was laid using a portable lay system and the vessel's 30-ton hydraulic crane.

The month-long project also involved installing a 16 x 6-inch hot tap fitting that allowed the client to continue operating the pipeline without disruptions.

Since 1890, Bisso Marine has provided quality services to the marine and energy industries, offering marine construction, pipe laying, salvage, heavy lift and diving services. With offices and strategic alliances located across the Gulf Coast, South America, Europe and Asia, the Bisso Marine fleet is uniquely positioned to provide a full range of maritime services and emergency response across the globe.
